

Role name: Lead Project Manager Canada

Time to start: July 2022

Scope: construction aspects of the assets.

Responsibilities: to be responsible for the construction of renewable assets in Canada reporting directly to the Country Manager and Group Technical Director.

Qualifications

- Engineering Technical Degree in Renewable Energies or Electrical Engineering.
- A minimum of 5 years of experience in the development, construction and operation of Photovoltaic Solar assets.
- A minimum of 5 years of experience in utility scale photovoltaic projects.
- Considerable knowledge of H&S procedures to ensure full compliance by the EPC contractor.
- High degree of self-responsibility, entrepreneurial understanding, and flexibility.
- Driven and able to take initiative, utilising time efficiently to meet deadlines effectively.
- Strong written and oral communication skills.
- Fluent spoken and written business English.
- Strong IT skills.
- Willingness to travel.
- Right to work in Canada.

Role definition:

- Determine contract resource requirements, service specifications and manage contractor performance.
- Consult on engineering.
- Permit compliance and oversee the process leading to Notice to Proceed on projects to be constructed.
- Maintain relationships in country with selected Tier 1 suppliers and country supply chain issues
- Manage activities related to coordination of field inspection and sign offs for construction projects.
- Monitor and evaluate activities of outsourced Construction companies to ensure adherence to safety, quality, schedules and budgets, cost-effectiveness and control, and results.
- Develop, review and evaluate contracts and agreements affecting the project execution and functional area operations and make appropriate recommendations
- Collaborate with management staff to resolve problems and coordinate activities with the field construction managers.
- Ensure that construction management is integrated into the planning, scheduling, cost tracking, construction, installation, and testing and acceptance activities.
- Ensure Field Construction Managers obtain all construction materials and material handling plans are established and managed.
- Provide constructability feedback on electrical, mechanical, protection and civil construction standards.

- Identify construction risk during the planning, execution and construction phases and prepare risk mitigation plans.
- Direct and source compliance documents to study permit requirements for maintaining compliance for projects connected to various ISO's
